Assessment instructions

Table 1 Assessment instructions

Assessment details	Instructions
Assessment overview	<p>The objective of this assessment is to assess your knowledge and performance in creating simple programs using introductory programming techniques.</p>
Assessment event number	<p>2 of 2</p>
Instructions for this assessment	<p>This is a project-based assessment that assesses your knowledge and performance of the unit.</p> <p>This is a project-based assessment that assesses the student on their knowledge and performance of the unit.</p> <p>This assessment is in five parts:</p> <ol style="list-style-type: none"> 1. The project brief 2. Design the application 3. Develop the program 4. Testing 5. Program debugging <p>And is supported by:</p> <ul style="list-style-type: none"> • Assessment Checklist • Assessment feedback (not included here) • ICTPRG302 AE Pro Appx which contains: <ul style="list-style-type: none"> • Gelos Enterprises Software Design Form • accounts.txt (test data) <p>Note: This assessment may contain links to external resources. If a link does not work, copy and paste the URL directly into your browser.</p>

Assessment details	Instructions
<p>Submission instructions</p>	<p>On completion of this assessment, you are required to submit it to your Teacher/Assessor for marking. Where possible, submission and upload of all required assessment files should be via the TAFE NSW online learning platform.</p> <p>It is important that you keep a copy of all electronic and hardcopy assessments submitted to TAFE and complete the assessment declaration when submitting the assessment.</p>
<p>What do I need to do to achieve a satisfactory result?</p>	<p>To achieve a satisfactory result for this assessment you must answer all the questions correctly.</p> <p>If a resit is required to achieve a satisfactory result it will be conducted at an agreed time after a suitable revision period.</p>
<p>What do I need to provide?</p>	<ul style="list-style-type: none"> • TAFE NSW student account username and password. If you do not know your username and password, contact your campus or service centre on 131601. • Computer or other device with word processing software, internet access and a camera and microphone or mobile phone to make recordings. This course will require you to record yourself for certain assessment tasks. These recordings are for assessment purposes only and will only be shared with your assessing teacher. • Programming software – either Python, Unreal Engine or other programming software used in class studies. • Reference documents.

Assessment details	Instructions
<p>What the Teacher/Assessor will provide</p>	<p>Access to this assessment and learning resources, including the student workbook and any supporting documents or links.</p> <p>Equipment/resources, including:</p> <ul style="list-style-type: none"> • If working in a classroom, computer with camera and microphone. • Software – Python, Unreal Engine (C++) or other programming software used in the learning activities. • ICTPRG302_AE_Pro_Appx which contains: <ul style="list-style-type: none"> • Gelos Enterprises Software Design Form • accounts.txt (test data)
<p>Due date</p> <p>Time allowed</p> <p>Location</p>	<p>Refer to UAG</p> <p>Five hours (indicative only)</p> <p>Assessment may be completed in a class or online environment.</p>
<p>Assessment feedback, review or appeals</p>	<p>In accordance with the TAFE NSW policy <i>Manage Assessment Appeals</i>, all students have the right to appeal an assessment decision in relation to how the assessment was conducted and the outcome of the assessment. Appeals must be lodged within 14 working days of the formal notification of the result of the assessment.</p> <p>If you would like to request a review of your results or if you have any concerns about your results, contact your Teacher/Assessor or Head Teacher. If they are unavailable, contact the Student Administration Officer.</p> <p>Contact your Head Teacher/Assessor for the assessment appeals procedures at your college/campus.</p>

Specific task instructions

The instructions and the criteria in the tasks and activities below will be used by the Teacher/Assessor to determine if the student has satisfactorily completed this assessment event. Use these instructions as a guide to ensure the student demonstrates the required knowledge and skills.

To complete this part of the assessment, you are required to evidence your participation in an interactive role-play. This will be achieved by viewing an interactive video and then capturing your responses in a recording.

Refer to the Observation Checklist to understand what skills you need to demonstrate in this section of the assessment. This checklist outlines the assessment criteria your Teacher/Assessor will be marking you on.

Once completed, the recorded evidence will be submitted via the online platform to the Teacher/Assessor for marking.

This digital recording may be either an audio file (sound only) or video file (video and audio). You may use your computer webcam and capture software or your mobile phone. Ensure you have access to the required equipment and resources.

If space or bandwidth is limited, create an audio file rather than video. Video file uploads are limited to 1Gb.

TIP: The following may be helpful: [video recording instructions \(pdf\)](#). This one-page includes useful tips, links to resources, and a demonstration video.

Refer to the scenario outline and start with task 1.1 to complete this assessment part.

The scenario

You have been employed as an ICT trainee with [Gelos Enterprises](#). To further your training, the company has asked Christina Kaiser, the Software Development Team Leader, to train you in all aspects of programming and you have been assigned to a new programming project.

Gelos requires a simple login program with a menu of options:

- **Login** – for users who have previously registered. Username and password to be checked for validity.
- **Register** – create a new user account.
- **Passwords** – new users given the option to enter their own password or generate one.
- **Generated passwords** – user given the option to choose the password character types – numbers, symbols or letters. The default password length should be applied, but users should also be allowed to choose how many characters
- **Save file** – usernames and passwords should be saved to a text file **accounts.txt**
- **Exit** – delay for 2 seconds before exit
- **View accounts** – to display user account information from the accounts.txt file (assuming that only admin have access to this program).

You will need to interview your supervisor, Christina Kaiser to get all of the information you need and clarify the details of the project.

For the purpose of this assessment, an interactive conversation featuring Christina Kaiser has been pre-recorded. Refer to Task 1.1 – **interactive video roleplay**.

To complete this task, you will need to access and view this [interactive video](#).

Part 1: The project brief

Task 1.1: Confirm work brief and clarify requirements – interactive video roleplay

Getting ready for the roleplay:

- Look at the partially completed software design document, so you know what details are missing from the project brief.
- You will need to ask Christina three questions regarding the project. Be clear and specific in your request for each piece of information and use correct terminology – it is not enough to say, 'what about passwords?' and assume they will know what you mean.
- See the table below for a list of what these questions should be about and in what order you should ask them. As this is a pre-recorded video, you will need to ask the questions in the same order as they appear in the table below.

Use this table to prepare and write down your questions to remind yourself of what to ask:

Table 2 Questions template

Ask a question about:	Question to ask Christina
The programming language to be used for the project	Hi Christina, I have reviewed the Software Design Document, can you please confirm the purpose of the program and what programming language will be used for the project.
Confirm the format of the passwords to be generated	Ok perfect thank you, can you please confirm if the passwords will be generated automatically, or will the user decide the password?
Confirm the length of the password	Could you also please confirm the default length of the password?

Create your recordings

To complete this task, you will need to access and view this [interactive video](#).

The interactive video will have three pause points where you will ask your questions to Christina Kaiser. You may submit your three questions **within one recording** or **separate files**. If in one recording, leave a 10 second gap between your questions so the assessor can clearly identify your three different questions.

Recording process:

- Activate the [interactive video](#).
- The video will play, Christina will speak, and a message will appear asking you to record your question. Press pause on the video.
- Use your device to start recording and proceed to record your first question.
- When finished recording, press pause on your recording device.
- Return to the video and press play to continue.
- Repeat this process until you have recorded all three questions.

At the end of the interactive roleplay, you have the opportunity to play back your recordings. If you are not happy with your recordings, you can restart the interactive video and re-record your questions.

If you are happy with your recordings, save the file(s), upload in the space provided and click 'Submit'.

Task 1.2: Complete the Software Design Document

Once you have met with Christina and confirmed the requirements of the project, complete the required sections of the Gelos Software Design Document.

Save the program specification form as per company naming conventions (**Yourname_Software_Design_Document.docx**).

Part 2: Design the application

Task 2.1: Coding rules

Before commencing on your design, it's a good idea to refresh your memory on the rules of coding. In the space provided in the Gelos Software Design Document (*Coding Rules*), list five basic rules for the programming language you are using to complete this project. Include a brief explanation of each rule (approximately 20-30 words each).

Task 2.2: Design data library variables

You will need to use variables in your application. In the space provided in the Gelos Software Design Document (*Data Library Variables*), list all of the variables needed for your design and identify how these variables will be used.

Task 2.3: Identify variable scope

For each of the operators and expressions to be used in your program, nominate the scope for that variable. Record these details in the space provided in the Gelos Software Design Document (*Variable Scope*). For example: global, username.

Task 2.4: Inspect test data

To enable testing of the program once it has been created, a data file containing test data has been provided. Inspect the file **accounts.txt** to familiarise yourself with this data. These details have already been recorded in the Gelos Software Design Document (*Program Test Data*).

Task 2.5: Develop an algorithm

Develop an algorithm using a suitable tool such as pseudocode or a flowchart.

Include the following:

1. Iterate through the **accounts.txt** file to read each record. Use a logical operator in the iteration, either when entering or exiting the loop.
2. Use a logical operator to allow the users to select a menu option using either upper-case or lower-case characters (for example: a or A).
3. Include other steps in a logical sequence.

Paste a copy of the pseudocode or flowchart in the space provided in the Gelos Software Design Document (*Program Algorithm*).

Part 3: Develop the program

Task 3.1: Develop the program

Code the algorithm in the programming language you are learning in this unit, using the correct syntax, including:

1. A comment at the very top of the program that includes your name, date and purpose of program.
2. Use appropriate function libraries.
3. Comment your code throughout.
4. For saving (write) and viewing (read) account details using file (accounts.txt), make use of control structures (selection and iteration as required).
5. Use expressions, constructs and logical operators to display main menu, log in, generate random password and create accounts. Remember to allow the users to select a menu option using either upper-case or lower-case characters (for example: a or A).
6. Include data structures in the creation of the login process.
7. Apply string manipulation by concatenating the elements of the randomly generated password.

Paste a copy of the program code (or blueprints) into the Gelos Software Design Document(*Program Code*).

Task 3.2: Present to supervisor, obtain feedback and sign off

Now that you have designed and created the program, you will need to present it to your supervisor for feedback and approval. Submit these assessment pages and your GelosSoftware Design Document via the online learning platform and await feedback before proceeding with the testing.

Table 3: Feedback

Feedback from supervisor (assessor)

To be completed by the assessor

Task 3.3: Modify your program

Once you receive the feedback, make any changes or modifications that were recommended and update your Gelos Program Design Document (*Changes Required from Feedback*) to record the changes made.

Note to student – if you have some spare time while awaiting feedback, you can complete the small programming task in Part 5 of this assessment.

Part 4: Testing

Task 4.1: Test and record results

Test and record the results of your testing in the Software Test Report section of the Gelos Software Design Document. Be sure to include tests for all four menu options, as well as for menu options that do not exist, for example, try entering Q and test the results.

For each test, take a screenshot and save the image using a suitable file name. Record the filename in the Screenshot Filename column of the Software Test Report table.

When all testing is complete, create a zip file containing all of your screenshot images. Name this file **YourName_Testing.jpg** for inclusion in your final submission.

Task 4.2: Software evaluation

Now that you have completed your program and testing, you will need to evaluate your solution and ensure it meets the specifications requested by the client. In the Software Evaluation section of the Gelos Software Design Document, complete the table with the specification and the evaluation of your solution.

Task 4.3: Programmers checklist

Complete the programmer's checklist in the Gelos Software Design Document to ensure you have completed all tasks.

Part 5: Program debugging

After completing the program for the login, Christina Kaiser has asked for your assistance with another small job, fixing a program that was written by another trainee which is not correct.

The trainee was asked to create an application that determines the average mark for a student based on their marks from five different subjects (see code below).

The instructions stated that the application must do the following:

- Ask the user to input the marks for the five subjects in a list/array.
- The program must ensure that the marks are between 0 and 100
- Display the list/array of marks entered.
- Find the sum of all the marks in the list (all five subjects) and display the output as:
 - The sum of your marks is: [sum]
- Find the average of all the marks in the list (all five subjects) and display the output as:
 - The average of your marks is: [average mark]

Table 4: Code for marks program

Code for marks program

```
print("please enter your 5 marks below")

#read 5 inputs
mark1 = int(input("enter mark 1: "))
mark2 = int(input("enter mark 2: "))
mark3 = int(input("enter mark 3: "))
mark4 = int(input("enter mark 4: "))
mark5 = int(input("enter mark 5: "))

#create array/list with five marks
marksList = [mark1, mark2, mark3, mark4, mark5]

#print the array/list
print(marksList)

#calculate the sum and average
sumOfMarks = sum(marksList)
averageOfMarks = sum(marksList)/5

#display results
print("The sum of your marks is: "+str(sumOfMarks))
print("The average of your marks is: "+str(averageOfMarks))
```

Test data

Table 5: Test data

mark1	mark2	mark3	mark4	mark5	Expected sum	Expected average	Comments
10	12	16	14	18	70	14	
A	B	D	A	C	n/a	n/a	Exception error on input
17	17	199	20	-17	90	18	

1. Create another test case using the samples above as a guide.
2. Use debugging and problem-solving techniques to detect and correct errors in the code (use the test cases to confirm the design specifications). This must include examining the contents of the variables. Document the changes you made by including comments in the code, using the correct syntax.

Table 6: Corrected code for marks program

Corrected Marks code
<i>Paste corrected code here</i>

2. For each of the test data that generates an error, include labelled screenshots below of your debugging techniques. (2 screenshots)

Table 7: Debugging screenshots

Debugging screenshots
<i>Paste screenshot here</i>
<i>Paste screenshot here</i>

Submission

Now that you are all done, you need to submit your files, including:

- These assessment pages
- Your interview video recordings
- The completed Gelos Software Design Document
- The zip file containing your testing screenshots.

Observation Checklist

The Observation Checklist will be used by your Teacher/Assessor to mark your performance in the previous event type/s. Use this Checklist to understand what skills you need to demonstrate in the role play scenario, presentation or demonstration. The Checklist lists the assessment criteria used to determine whether you have successfully completed this assessment event. All the criteria must be met. Your demonstration will be used as part of the overall evidence requirements of the unit. The Teacher/Assessor may ask questions while the demonstration is taking place or if appropriate directly after the task/activity has been completed.

Table 8: Observation checklist

TASK/ STEP #	Instructions	S	U/S	Assessor Comments
1	Used effective questioning and listening techniques to confirm requirements, articulate complex concepts using common programming terminology.	<input type="checkbox"/>	<input type="checkbox"/>	<i>Date of Observation:</i>

Assessment Checklist

The student's copy of the Assessment Checklist will be used by you to capture evidence of their performance in this Part 1 of this assessment. This checklist outlines all the required criteria you will be marking the student on. All criteria described in the Assessment Checklist must be met. The following checklist contains benchmark responses for you to use when assessing to ensure the reliability of judgement.

Table 9: Assessment checklist

TASK/STEP #	Instructions	S	U/S	Assessor Comments
Part 2 Task 2.1	Student identified programming standards and guidelines according to task requirements	<input type="checkbox"/>	<input type="checkbox"/>	Date of Observation: Assessors are to record their observations in enough detail to demonstrate their judgement of the student's performance against the criteria.
Task 2.2	Student applied variables	<input type="checkbox"/>	<input type="checkbox"/>	
Task 2.3	Student has applied variable scope	<input type="checkbox"/>	<input type="checkbox"/>	
Task 2.6	Student has designed an algorithm in response to basic program specifications	<input type="checkbox"/>	<input type="checkbox"/>	
	1. Student created expressions in selection and iteration constructs using logical operators	<input type="checkbox"/>	<input type="checkbox"/>	
	2. Student used logical operators for menu selections	<input type="checkbox"/>	<input type="checkbox"/>	

TASK/STEP #	Instructions	S	U/S	Assessor Comments
	3. Student applied language syntax in sequence, selection and iteration constructs	<input type="checkbox"/>	<input type="checkbox"/>	
Part 3 Task 3.1	Student created code using language data types, operators and expressions and developed application to meet program specification	<input type="checkbox"/>	<input type="checkbox"/>	
	1. Student added comment to top of code with name, date and purpose of program	<input type="checkbox"/>	<input type="checkbox"/>	
	2. Student used appropriate library functions	<input type="checkbox"/>	<input type="checkbox"/>	
	3. Student clarified meaning of code using commenting techniques	<input type="checkbox"/>	<input type="checkbox"/>	
	4. Student used selection and iteration constructs using logical operators and made use of control structures.	<input type="checkbox"/>	<input type="checkbox"/>	

TASK/STEP #	Instructions	S	U/S	Assessor Comments
	5. Student creates expressions in selection and iteration constructs using logical operators to display menu, log in, generate password and create accounts.	<input type="checkbox"/>	<input type="checkbox"/>	
	6. Student creates and uses data structures in the creation of the login process.	<input type="checkbox"/>	<input type="checkbox"/>	
	7. Student applied string manipulation by concatenating the elements of the password.	<input type="checkbox"/>	<input type="checkbox"/>	
Task 3.2	The student presented their program for feedback and approval.	<input type="checkbox"/>	<input type="checkbox"/>	

TASK/STEP #	Instructions	S	U/S	Assessor Comments
Task 3.3	Student modified program as per feedback and obtained sign off	<input type="checkbox"/>	<input type="checkbox"/>	
Part 4 Task 4.1	The student used debugging techniques to detect and correct errors; created and confirmed simple tests; documented actions taken to fix coding errors.	<input type="checkbox"/>	<input type="checkbox"/>	
Task 4.2	Student carried out evaluation to confirm application meets initial specifications	<input type="checkbox"/>	<input type="checkbox"/>	
Part 5 Task 5.1	Student examined variable contents and use debugging techniques to detect and correct errors, documenting changes made in the code	<input type="checkbox"/>	<input type="checkbox"/>	

TASK/STEP #	Instructions	S	U/S	Assessor Comments
Task 5.2	Student documented test data errors (by providing screenshots)	<input type="checkbox"/>	<input type="checkbox"/>	

Assessment feedback

NOTE: This section must have the Teacher/Assessor and student signature to complete the feedback. If you are submitting through the TAFE NSW online learning platform, your Teacher/Assessor will give you feedback via the platform.

Assessment outcome

- Satisfactory
- Unsatisfactory

Assessor feedback

- Has the assessment declaration for this assessment event been signed and dated by the student?
- Are you assured that the evidence presented for assessment is the student's own work?
- Was reasonable adjustment in place for this assessment event?

If yes, ensure it is detailed on the assessment document.

Comments:

Assessor name, signature and date

Student acknowledgement of assessment outcome

Would you like to make any comments about this assessment?

Student name, signature and date
